

Introduction

The ClassView is a compact unit that allows for a teacher, professor or group leader to view, share or control any of the students computers at any time. Since the instructor has total control of the ClassView system, he/she can disable any single or all student keyboards, monitors and mice or lock the student screens while disabling the keyboards and mice. When a student has done something particularly interesting, the instructor can easily display that student's screen on every other student monitor. Of course, the instructor can also display his/her screen to an individual or on all student monitors at will.

Easy to Use

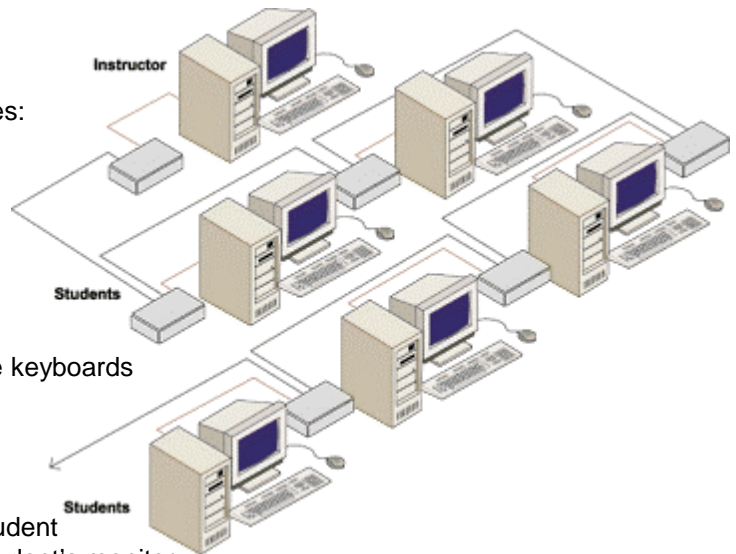

Because the ClassView works with both PS/2 and serial/AT type computers, set-up and operation is simple - just ensure you specify the number of each computer type when ordering. Once installed, LED lights on the front of the unit indicate that there is no conflict with addresses and termination. The instructor's unit comes with a keyboard template to assist in learning the keystrokes used in controlling the ClassView systems.

Compatibility

The ClassView is software independent and will run on a wide variety of operating systems, including DOS, UNIX, Netware, Window 3.x, Windows 95, Windows NT and OS/2 to name a few. With no software to install, the ClassView is the ideal solution for every training environment.

Features

- Instructor can access any students' computer in three modes:
 - a) **View Mode** - observe student computer while they work
 - b) **Share Mode** - see student's station with interactive keyboard and mouse sharing.
 - c) **Control Mode** - see student's station with complete control over their keyboard and mouse.
- Instructor can enable and disable student's computer in two modes:
 - a) **Disable** - student/students' screens are blanked while the keyboards and mice are locked out.
 - b) **Freeze** - student/students' screens remains on, but all keyboards and mice are locked out.
- Instructor can display images in three modes:
 - a) **Show** - Instructor's screen is displayed to all or a single student
 - b) **XView** - Student's image is displayed on all or a single student's monitor
 - c) **XShare** - Two students can see and work off of eachother's computers
- Scan mode allows the instructor to sequentially view each student's computer
- Expandable up to 255 stations
- Connections between units uses high quality 13W3 connectors for crystal clear video, even at long distances
- Supports a mixture of PS/2 and serial/AT computers
- Supports up to 1280 x 1024 non-interlaced video resolution
- **All required system cables included**
- No software to install
